

RATIONAL OF THE SYMPOSIUM:

Portal hypertension is the main complication of cirrhosis, causing ascites, esophageal bleeding from varices, hepatorenal syndrome, encephalopathy, bacterial translocation.

TIPS (transjugular intrahepatic porto-systemic shunt) decreases portal pressure and is considered for intractable bleeding and ascites.

Early TIPS has recently been suggested as an alternative therapy in patients with clinically significant portal hypertension.

The symposium will focus on this topic, discussed by some of the best experts in the field.

VENUE:

Vecchioni Room

AOUI di Verona - Ospedale di Borgo Roma,
Piazzale L.A. Scuro, 10,
37134, Verona (VR), Italy
